

# SDLC Checklist

## 1. Requirement Analysis

- - Identify stakeholders and end-users
- - Collect functional and non-functional requirements
- - Define scope and objectives
- - Prioritize requirements
- - Validate requirements with stakeholders

## 2. System Design

- - Create system architecture diagrams
- - Design database schema (ER diagrams)
- - Define user interface (UI/UX) mockups
- - Ensure scalability and security considerations
- - Review design with stakeholders

## 3. Implementation (Coding)

- - Set up development environment
- - Follow coding standards and guidelines
- - Implement modular and reusable code
- - Version control with Git
- - Conduct unit testing

## 4. Testing

- - Prepare test cases (unit, integration, system)
- - Conduct functional and non-functional testing
- - Fix bugs and re-test
- - Validate against requirements
- - Get user acceptance testing (UAT) approval

## 5. Deployment

- - Set up production environment
- - Perform deployment dry-run
- - Deploy system to production
- - Monitor performance and errors
- - Prepare rollback plan

## 6. Maintenance

- - Provide user training and documentation
- - Track issues and feedback

- - Release patches and updates
- - Ensure scalability for growing users
- - Plan for future enhancements
